

INFORMATIONAL NOTICE

Pacific Pump Station Project: Soils & Geologic Field Work

During March 2002, King County will be gathering soils and geologic data for the Pacific Pump Station Project.

The existing Pacific Pump Station, an underground facility located east of Tacoma Boulevard N and north of the 1st Avenue NW right-of-way, is approaching the end of its useful service life. The existing pump station also needs to be expanded to convey existing and projected wastewater flows from City of Pacific into the King County wastewater treatment system.

King County is designing a new aboveground pump station to replace the existing facility. The new pump station will be moved across the Interurban Trail from the existing pump station. The location of the new pump station will be at Frontage Road and the 1st Avenue NW right-of-way.

During March 2002, data will be gathered at the proposed pipeline and pump station construction site, along the undeveloped 1st Avenue NW right-of-way between Tacoma Boulevard N and Frontage Road in the City of Pacific.

What can you expect?

During March 2002, King County will be gathering soils and geologic data. Site work will begin March 4, 2002 and should be concluded in about 7 days.

- There will be a drilling truck operating between 8 am and 5 PM weekdays.
- In addition to the drilling crew, an engineer will be there to oversee the work. The soils and geologic information is necessary to determine design parameters and allowable construction methods for both the pump station and associated pipelines.
- Design of the pump station will be completed in 2003, with construction planned in late 2003.

Working with you

King County is committed to working with you to ensure that your questions and concerns are addressed. If you have questions or comments about the Pacific Pump Station Project, please contact:
